© 2010 Baylor College of Medicine. This activity is part of The Science of Air unit. The Science of Air Teacher’s Guide may be used alone or with integrated unit components. The Air unit is comprised of the guide, Mr. Slaptail’s Secret student storybook, Explorations magazine, and two supplements: The Reading Link and The Math Link. For more information on this and other educational programs, contact the Center for Educational Outreach at 713-798-8200, 800-798-8244, or visit www.bcm.edu/edoutreach.
ACKNOWLEDGMENTS
The Science of Air educational materials, first developed as part of the My Health My World® project at Baylor College of Medicine, have benefited from the vision and expertise of scientists and educators representing a wide range of specialties. Our heartfelt appreciation goes to Michael Lieberman, M.D., Ph.D., William A. Thomson, Ph.D., and Carlos Vallbona, M.D., who have lent their support and expertise to the project.

Special acknowledgment is due to our original partners in this project, the Texas Medical Association and the American Physiological Society (APS). We especially thank Marsha Lakes Matyas, Ph.D., of APS, for her direction of field test activities and ongoing collaboration.

Several colleagues provided valuable assistance during the development of this guide. In particular, we would like to thank Zenaido Camacho, Ph.D., Cynthia Jumper, M.D., Fabiola Pineda, M.S., Ronald Sass, Ph.D., and Cathey Whitener, M.S.

Special thanks go to the National Institute of Environmental Health Sciences, Allen Dearing, Ph.D., Frederick Tyson, Ph.D., and Liam O’Fallon for their support of the My Health My World project and the related Environment as a Context for Opportunities in Schools (ECOS) project.

We are especially grateful to the many classroom teachers in Washington, D.C., and Houston and Austin, Texas, who participated in the field tests of these materials and provided invaluable feedback.
We tend to forget that environmental problems are not restricted to outside habitats (natural or urban). Most people’s homes, offices and schools are the “environments” in which we spend most of the day and night. Since we spend so much time inside, the quality of our indoor environments is very important.

Indoor air can be polluted by many sources. Some indoor air pollutants are so irritating that they can bother anyone who breathes them. These include paints, asbestos fibers, smoke, cleaners, insect sprays and chemicals used on fabrics. Other pollutants can cause more problems for some people than for others. For example, some people are allergic to dust. When they breathe dusty air, people with dust allergies may start to sneeze, or experience runny noses and itchy eyes. Once in a while, dusty air can cause serious breathing problems, such as those associated with asthma.

How can we keep the air inside our homes and other buildings clean and safe to breathe? A little common sense goes a long way. We can be careful about using chemical cleaners, paints, glues and pesticides. Even better, we can use products that don’t pollute. We can reduce the amount of dust in the air by regularly changing the filters in our home heating and cooling systems. We can eliminate some sources of indoor air pollution, such as tobacco smoke, completely.

**Setup**

This activity should be introduced and summarized as a whole-class discussion. Students will work individually as they conduct their home air surveys.

**Procedure**

Part 1. Getting started

1. Ask students to mention some things they have learned about indoor air. If you have used the Air unit’s *Explorations* magazine and/or read the story, *Mr. Slaptail’s Secret*, one or the other might serve as a basis for beginning a discussion. Otherwise, initiate a class review of different sources of indoor air pollution.

2. Mention that we can do many things to improve the quality of the air we breathe at home. Stress that before trying to solve problems of this type, we must look for possible sources of indoor air pollution. After those sources are identified, we can
3. Give each student a copy of the “Healthy Home Survey” student page. Ask students to take their pages home and use them to conduct a survey of possible air pollutants inside their homes. Stress that an older family member or friend should help them conduct the survey. Students should circle or color different areas on their sheets in which they have found potential sources of indoor air pollution. Encourage them to draw any additional pollutants that they encounter during their surveys.

Part 2. Looking at results
1. Invite students to share their survey results with the class. Create a list on the board of different home air quality hazards identified, or make a transparency of the “Healthy Home Survey” sheet and make annotations while you project it as an overhead.
2. After the list is complete, have students suggest ways in which hazards can be decreased or eliminated. Do this as a whole-class discussion, or ask each student to write a paragraph about ways to improve indoor air quality.
3. Refer students to pages 28–29 of Mr. Slaptail’s Secret. Ask them to find the different ways Mr. Slaptail’s neighbors were able to eliminate air pollution inside his house.
4. Display the students’ surveys.

Part 3. Post-assessment
1. Hand out students’ pre-assessments, completed at the beginning of the unit. Ask students if there are any questions that they would answer differently now.
2. Have students use a different color ink to circle any new responses. On a separate sheet of paper, have students explain the reasoning behind their changes. Discuss students’ new responses as a group.

VARIATIONS
- Conduct a “Healthy Home Survey” in your school building. Have students work in teams of 2–4 and assign teams to different parts of the building. Bring the class together to discuss students’ observations and make a list of possible improvements. Be sure to identify measures already being taken to maintain a clean indoor environment in the building.

- Reduce unnecessary “dust catchers,” such as curtains.
- Store little-used things in plastic bags.
- Clean or change filters in heating and cooling systems frequently.
- Wash bedding in hot (at least 130° F) water to kill dust mites.
- Keep living and storage areas dry and well-ventilated.
- Store food leftovers in sealed containers to discourage cockroaches and other insects.
- Remove dust deposits with a damp sponge or cloth—especially when renovating.
- Ensure adequate ventilation when using products containing chemicals, such as those found in personal care or cleaning products.
